### DETAILED ACTION

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. Furthermore, under PCT Rule 13.2 the requirement of unity of invention referred to in PCT Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-23, 26, 29-30, drawn to a double stranded RNA molecule capable of suppressing the expression of a target gene in a cell by RNAi designed so that one or more nucleotides from the 3' end of the sense strand is not complementary to the antisense strand and the sense strand is complementary to the antisense strands to enable hybridization of both strands in a cell.

Group II, claim(s) 24-25, 27-28, drawn to a method of suppressing the expression of a target gene in a cell comprising introducing a double stranded RNA molecule into the cell.

The inventions listed as Group I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical feature for the following reason: the special technical feature of groups I and II is a double stranded RNA molecule comprising one or more nucleotides at the 3' end that is not complementary to the antisense strand. The double stranded RNA agent cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. Elbashir et al. (EMBO Journal, 2001, Vol. 20, No. 23: 6877-6888) teach a double stranded RNA molecule comprising one or more nucleotides at the 3' end that is not complementary to the antisense strand (see page 6878 and Figure 3). Therefore, unity of invention is lacking in groups I and II.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
